Speak Everywhere: Online Foreign Language Speaking Training System

Innovative software provides a system to develop and deliver customized foreign language speaking exercises, enabling instructors to monitor, grade, and give feedback on student progress.

When instructing foreign language students, monitoring their progress is vital to ensure they are learning the material according to the curriculum's timeline.

Researchers at Purdue University have developed an innovative computer software system that can accomplish this task. It is intended to provide a way to put together exercises for students and to deliver individualized foreign language speaking practice. It allows instructors to monitor, grade, and give feedback on a student's speaking practice.

Advantages:

-System develops speaking exercises for students

-Instructor can monitor student progress

Potential Applications:

-Classroom

-Tutors
